

## **willbridge terminal Portland, OR**

Chevron operates a terminal facility in the Portland community that stores refined products such as gasoline, diesel, jet fuel, bio-mass based diesel and lubricating oils. Terminals are industrial facilities that receive products sent from the refineries and plants via tanker truck, barge or pipeline. Terminals act as the link between processing products at refineries and plants and distributing the refined fuel that is sold at gas stations. From our Willbridge Terminal, we help provide affordable, reliable energy for the City of Portland, surrounding areas and throughout the State of Oregon as well as Southwest and Eastern Washington.

At Chevron, we are committed to protecting people and the environment. Our employees undergo periodic safety and incident response training. This ensures all operations are performed safely and in accordance with Chevron and industry standards. At Chevron, we are committed to incident-free operations.

As part of our Emergency Response Planning procedures, we keep local and state emergency responders and public officials informed about the status of our terminal and what to do in case of an emergency.

Our storage tanks are designed and maintained with the highest industry standards. This practice restricts gasoline vapors from entering the air we breathe, helps conserve energy resources and is in alignment with industry standards for seismic resiliency.

Our terminal participates in a number of community organizations and civic programs, including:

- The Linnton Community Center provides educational programming, a gathering place and recreational and community events for Historic Linnton.
- SOLVE brings individuals, business groups and other nonprofits together to restore natural spaces in Oregon, primarily by cleaning up beaches and illegal dumps.
- The City Club of Portland's programming provides an opportunity for the Portland community to come together to learn, share ideas and connect with other civic-minded people.
- The Word Forestry Center is a champion for a sustainable forestry future.
- The Oregon Museum of Science and Industry (OMSI) is Portland's science and technology museum.
